

INSTRUCTIONS

- RIGGED BRA and RIGGED PANTIES

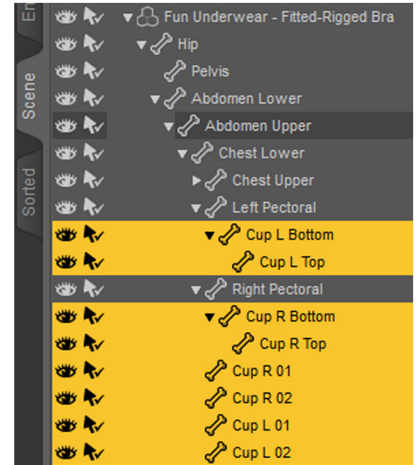

Load these props into the scene with nothing selected. They will appear on the G8F figure if it is in the default position. Pose them with the movement/rotation/scale of the bones. If you need to move or rotate the complete prop, you can use the "Hip" bone to do so.

- FITTED-RIGGED BRA

Load it with G8/8.1F selected in the scene. It will load parented and fitted on the figure.

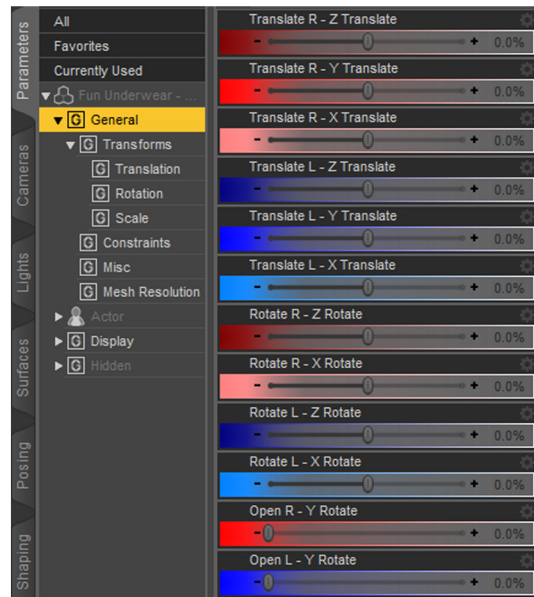

Use the separated bones of the cups to move/rotate/scale those parts (Cup L Bottom, Cup L Top, Cup L 01, Cup L 02, Cup R Bottom, Cup R Top, Cup R 01, Cup R 02).

If you want to pose the complete cup you can use the easy posing sliders (Select the root bone and go to the Parameters tab/General).

Easy posing sliders of the Fitted-Rigged Bra:

- Translate R - Z Translate.
- Translate R - Y Translate.
- Translate R - X Translate.
- Translate L - Z Translate.
- Translate L - Y Translate.
- Translate L - X Translate.
- Rotate R - Z Rotate.
- Rotate R - X Rotate.
- Rotate L - Z Rotate.
- Rotate L - X Rotate.
- Open L - Y Rotate (opens the cup to the side).
- Open R - Y Rotate (opens the cup to the side).

- FITTED BRA

Load it with G8/8.1F selected in the scene. It will load parented and fitted on the figure. The Fitted Bra doesn't have any posable parts.

See next page for more info

INSTRUCTIONS

- FITTED-RIGGED PANTIES

Load it with G8/8.1F selected in the scene.
It will load parented and fitted on the figure.

The upper part (waistband) will follow the figure while the lower part has posable bones (Bone 01, Bone 02, Bone 03, Bone 04, and Bone 05).

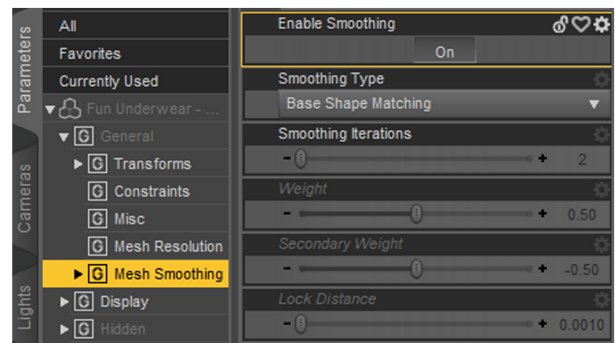

Most of the time the posable part will be in the right position even if you pose the figure but sometimes it will need some adjustments. Fitted-Rigged Panties were designed on the G8F figure without any genital model applied, so if you load a genital model on the figure they might need some minor adjustments of the posable bones.

This prop also has the Smoothing Modifier applied to it.

When the prop is loaded into the scene the Smoothing Modifier will be switched off, if you want to have it on, go to the Parameters tab/Mesh Smoothing and set the Enable Smoothing option to On. Enabling it will help with pokes through of the genital models such as db xxx-XX without moving the bones, and it also can help with posing.

Give it a try and see if it suits your workflow.

In the Materials folder you can find presets "Wrinkles ON" and "Wrinkles OFF", these presets are made for Fitted-Rigged Panties and poses where the part around the genitalia is pushed aside and scaled to be more narrow.

The wrinkles presets will work on every material but will be more visible on the plain ones.

If you'd like to make the wrinkles stronger you can go to the Surfaces tab/"Default" surface/Geometry/Displacement and adjust the max/min displacement option.

- BONUS poses:

- Dropped Pose 01 - Rigged Bra.
- Dropped Pose 01 - Rigged Panties.
- Dropped Pose 02 - Rigged Bra.
- Dropped Pose 02 - Rigged Panties.
- Stripping Pose - Fitted-Rigged Bra.
- Stripping Pose - Rigged Panties.
- Stripping Pose - G8F.

Dropped Pose 01 for Rigged Bra and Dropped Pose 01 for Rigged Panties can be used separately or together, the same goes for the Dropped poses 02.

Stripping poses are made to be applied together (although the Stripping Pose for the Fitted-Rigged Bra is optional for the complete look).

NOTE : Stripping Pose for the Rigged Panties was created on a G8F figure with the db xxx - XX genitalia applied (in its original pose and shape).

If you are not using db xxx - XX genitalia you might need to slightly adjust some bones of the panties to suit your genital model or a lack of it.

See next page for more info

INSTRUCTIONS

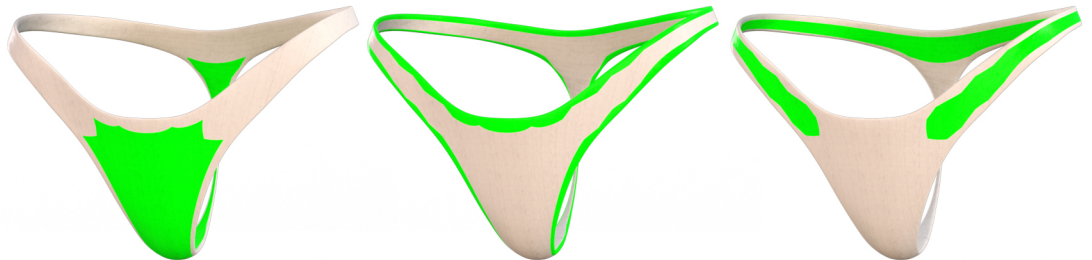

- MATERIALS

All 3 bras use the same bra material presets, and both panties use the same panties material presets. Select the bra/panties in the scene and apply a material of your choice.

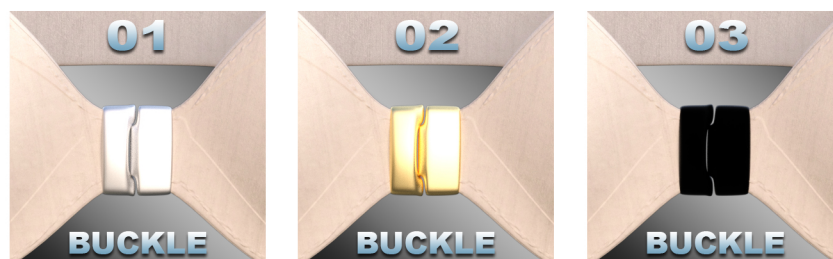

Bra props are divided into 5 surface sections to which you can apply the material presets separately, just select the bra in the scene and apply the partial material preset which will change only that surface section. This option allows you to have 2-5 different materials on one bra and create your own mixed look.

Panties are divided into 3 surface sections to which you can also apply different partial material presets creating a mix.

In the Materials folder, you can also find 3 different material presets for the buckle, to apply those select the bra in the scene.

"Wrinkles" presets are also in the Materials folder. To apply or remove the wrinkles select the Fitted-Rigged Panties in the scene.

Wrinkles will be visible only in renders.
