1. First load the "Hair Holder G" with G8F/G8.1F selected in the scene and/or "Hair Holder F" with Futalicious genitalia selected in the scene.
   Both should automatically fit to corresponding figure (pic. 1 - Holders loaded).

Growler F Pro - Hair Holder G

load with G8F/G8.1F selected in the scene

HairHolder G

1

- Genesis 8 Female
  - Hip
  - Genesis 8 Female Eyelashes
  - Futalicious Genitalia
    - Hip
  - Growler F Pro - Hair Holder F
 - Futalicious Shell
  - Growler F Pro - Hair Holder G

2. Load the hair style of your choice, and while the hair is selected, go to Parameters/Misc and under Fit To choose "Hair Holder G" for G Styles or "Hair Holder F" for F Styles. This will allow the prop to follow the figure (pic. 2).

— If you encounter any issues feel free to write to lightblue3design@gmail.com —

3. Fitting and parenting in place will make the hair prop snap to the hair holder on an already posed figure (if you'd like to move the figure by its root bone you should unparent it!). If the figure is in the default pose there is no need for parenting at all, just fit the hair as instructed before.

4. In order to load materials hair prop should be selected in "scene" pane. The hair color will be visible in renders although it is appearing black in viewport.

5. Two Hair holder props cover the area completely, but also assure that all of the Genesis and Futalicious morphs are followed correctly (pic. 3).

3

2. Corresponding styles F and styles G are made to be used together, but they can be used separately and mixed as well. There are also five additional trimmed G styles.(pic. 4)
